TCS NQT PYQ QUESTIONS

Company: TCS NQT
Round: Online
Year: 2025
Difficulty: High
Topic: Compound Interest

Problem Description:

A sum of money, invested at compound interest, amounts to Rs. 4,840 at the end of 2 years and to Rs. 5,324 at the end of 3 years.

Find the rate of interest per annum.

Options:

A) 8%
B) 9%
C) 10%
D) 12%

Correct Answer:

C) 10%

Approach to Solve This Problem:

STEP 1:

The difference between the amount at the end of year 3 and the amount at the end of year 2 is exactly the interest earned during the 3rd year alone, since compound interest for that single year is calculated on the year-2 amount.

Interest for the 3rd year = 5324 – 4840 = Rs. 484.

STEP 2:

This interest of Rs. 484 was earned on a principal (for that year) equal to the amount at the end of year 2, i.e. Rs. 4840.

So the rate of interest = (484 / 4840) × 100 = 10%.

CORRECT ANS = 10%
