

TCS NQT PYQ QUESTIONS

Company: TCS NQT

Round: Online

Year: 2025

Difficulty: Easy to Medium-Hard

Topic: Profit and Loss

Source: <https://bharatnqt.com/tcs-nqt-previous-year-questions/>

Problem Description:

A shopkeeper sells an article at Rs. 1260 making a profit of 5%. At what price should he sell it to make a profit of 15%?

Options:

- A) Rs. 1350
- B) Rs. 1380
- C) Rs. 1400
- D) Rs. 1420

Correct Answer: B) Rs. 1380

Approach to Solve This Problem:

STEP 1: Find the Cost Price (CP)

We know:

$$SP = CP + 5\% \text{ of } CP$$

Therefore,

$$1260 = CP * (105/100)$$

$$CP = 1260 * (100/105)$$

$$CP = \text{Rs. } 1,200$$

STEP 2: Find the new Selling Price

For a SP with 15% profit:

$$SP = CP + 15\% \text{ of } CP$$

$$SP = 1200 * (115/100)$$

$$SP = \text{Rs. } 1,380$$

The shopkeeper should sell the article for Rs. 1,380 to make a 15% profit.
