

TCS NQT PYQ QUESTIONS

Company: TCS NQT

Round: Online

Year: 2025

Difficulty: Medium-Hard

Topic: Time and Work

Problem Description:

A can complete a piece of work in 12 days and B can complete the same work in 15 days. They work together for 4 days, after which A leaves.

From that point on, B's working efficiency increases by 25% (less coordination overhead is needed once A is gone). In how many more days will B alone finish the remaining work?

Options:

- A) 4 days
- B) 4.5 days
- C) 4.8 days
- D) 5.2 days

Correct Answer:

C) 4.8 days

Approach to Solve This Problem:

STEP 1:

Take the total work as the LCM of 12 and 15, i.e. 60 units.

A's rate = $60/12 = 5$ units/day. B's rate = $60/15 = 4$ units/day.

STEP 2:

Working together for 4 days, they complete $(5 + 4) \times 4 = 36$ units.

Remaining work = $60 - 36 = 24$ units.

STEP 3:

After A leaves, B's efficiency rises by 25%, so B's new rate = $4 \times 1.25 = 5$ units/day.

Time for B to finish the remaining 24 units = $24 / 5 = 4.8$ days.

CORRECT ANS = 4.8 days
